

## Assembly of Nations 2026: Diplomacy in a Volatile World

The world stage is rarely quiet, and as the Assembly of Nations (AON) 2026 kicked off, it became clear that the global order is under immense pressure. From the freezing vacuum of outer space to the burning realities of the Red Sea and the humanitarian crises defining our modern era, delegates have gathered with one purpose: to bridge the chasm between rhetoric and resolution.

Day one began with a grand procession, the secretariat carrying the flags of major nations as a reminder of the global nature of these proceedings. The tone for the conference was set by Mr. Rahul Verma, Secretary General of the West Bengal Federation of UN Associations (WBFUNA), who delivered a poignant address on the history and birth of the United Nations. He challenged the assembly with a critical question regarding the UN's efficiency, noting that its effectiveness depends entirely on the cooperation of its member states.

Following an inspiring address by Ms. Julia Martin Legros, Education Officer of East India for the French Embassy (ACPF), who cited the adage, "Those who understand honours will be the ones who shape the future," the assembly was officially declared open. With the gavels passed, the committees broke into session, moving from ceremonial opening to the grinding gears of international policy.

## **UNGA-SPECPOL: The Final Frontier and Earthly Rivalries**

Outer space, once a symbol of humanity's boundless potential, has become a complex theater of legal and political contention. On June 29, 2026, the General Assembly signaled a move toward creating a new, legally binding framework for outer space, as delegates repeatedly labeled the 1967 Outer Space Treaty an outdated relic filled with dangerous gray areas. The discussions were characterized by a desperate push for consensus, yet the room was frequently ignited by geopolitical friction. Morocco took aim at India and China, citing past ASAT tests, while a volatile exchange between Iran and Israel nearly escalated the committee into an unplanned crisis session. Iran accused Israel of satellite jamming, while Israel countered by pointing to cyber-attacks. The tension reached a fever pitch when the Israeli delegation, in a slip of the tongue, appeared to acknowledge Palestinian statehood, causing an immediate uproar in the chamber.

Despite the volatility, the Executive Board enforced a structure of four working groups to draft concrete solutions. The groups, ironically pairing rivals like India, Pakistan, and China, or Iran and Israel, were forced to set aside grievances to produce a list of ten actionable solutions. The day closed with a fragile hope that these groups might succeed where diplomacy has historically faltered.

## UNSC: The Crucible of Conflict

The Security Council did not merely open; it ignited. From the first moments, it was clear that for many, international law is not a suggestion, but a requirement for survival. Germany delivered a surgical indictment of unilateral military strikes, while Panama, acting as a custodian of the global shipping registry, framed maritime aggression in the Red Sea as a "brutal tax" on the global economy.

The session grew even more intense when Israel and China took the floor. Israel presented a direct list of accusations against Iran, Hamas, Hezbollah, and the Houthis, while China, in a measured but devastating intervention, demanded an immediate ceasefire and full humanitarian access.

Behind closed doors, the masks fell away. During the forty-minute consultative session, the debate shifted from scripted national positions to the raw reality of the conflict. The council grappled with the uncomfortable truth regarding the weapon supply lines fueling the violence, moving beyond hypotheticals to address the documented destruction of civilian infrastructure. As the gavel fell, the council remained divided on the path to action, but the urgency of the crisis was undeniable.

## **UNHRC: The Unrelenting Search for Accountability**

In the UNHRC, the atmosphere was dominated by a singular, recurring theme: accountability. Throughout the General Speakers List, which was opened by the Maldives, the focus remained fixed on the obligation of state actors to protect civilian life and fundamental freedoms during periods of military escalation.

Cuba used its platform to raise significant concerns regarding the conflict involving Israel, emphasizing its steadfast commitment to international humanitarian law. Meanwhile, the Netherlands utilized a sophisticated rhetorical strategy to highlight the ongoing tragedy in Palestine. The United States played a pivotal role in the unmoderated caucuses, pushing for a baseline principle of equality before the law and advocating for asymmetric punishment for those who violate human rights. The committee's deliberations underscored the difficulty of ensuring justice in a landscape where political interests often collide with humanitarian imperatives.

### **C34: Navigating the Peacekeeping Paradigm**

The Special Committee on Peacekeeping Operations (C34) took on the monumental task of reevaluating the strategic and financial models that govern UN missions. Budgetary deficits were at the forefront of the discussion, with member states calling for more sustainable and flexible financing, as well as more equitable reimbursements for troop-contributing nations. The committee delved into technical and operational reforms, including the "Fiscal Diamond Space Model" designed to promote host-nation self-reliance. Discussions were particularly intense regarding personnel protection, drawing lessons from the MINUSTAH mandate in Haiti and the necessity for better civilian evacuation protocols. In the second session, the focus shifted toward the use of Contingent-Owned Equipment, with members demanding reforms to the current three-year review policy in favor of annual reviews. The committee also debated the integration of modern technology, including UAV-based threat identification and the use of heuristic models for rapid response, seeking to ensure that peacekeeping forces are equipped for the realities of modern, decentralized threats.

## **G20: Economic Stability in a Fragmented World**

The G20 committee convened to address the intersection of regional instability, global energy security, and supply chain resilience. The ministerial statements revealed a wide array of national priorities, yet the proposals from India and China stood out for their depth and ambition. India proposed a progressive, three-tiered tariff framework for maritime passage, aiming to balance the burdens between developed, developing, and least developed nations. They also advocated for a real-time satellite monitoring facility to track supply chain movements and proposed the restructuring of \$1.2 trillion in sovereign debt to fund green infrastructure. China, meanwhile, challenged the committee to consider the tension between rapid decarbonization and energy affordability, highlighting its own domestic policies on cost-sharing and graduated tariffs as potential models for international cooperation.

While the Executive Board noted that early deliberations lacked the desired cross-engagement, the committee rallied in the latter half of the day. Working groups centered on Energy Transitions, Trade and Investment, and Macroeconomic Stability saw a surge in participation, setting a productive foundation for the drafting phase of the committee's final resolutions.

*As the sun sets on the first day of the Assembly of Nations, the delegates leave with their mandates clarified and their work cut out for them. Tomorrow, the debate will resume, the drafting will intensify, and the world will continue to watch as these representatives attempt to turn the tides of international diplomacy.*
